

# Torque Transfer Clutch Assembly

This clutch assembly engages and disengages power transmission. It is suitable for automotive and motorcycle applications, facilitating gear changes and smooth starts.

## Overview

### Torque Transfer Clutch Assembly

This torque transfer clutch assembly is a critical mechanical component designed to engage and disengage power transmission between the engine and the transmission system. Engineered for durability, the assembly features a robust steel clutch basket, precision-fit friction plates, and a splined central hub for secure shaft engagement. It is an essential component for facilitating smooth gear changes and reliable vehicle starts and stops in automotive and motorcycle applications.

## Technical Details

### Key Components

- Clutch basket
- Friction plates
- Splined central hub
- Bearing/Bushing

### Construction Material

Steel

### Application Compatibility

Automotive, Motorcycle

## Condition

### Item Status

Pre-owned • Used
