

Tower Crane for Construction Sites

This heavy-duty machinery is designed for lifting and moving heavy materials at construction sites. The crane features a tall vertical mast and a long horizontal jib, enabling it to reach considerable heights and distances.

Overview

High-Performance Tower Crane

This tower crane is engineered specifically for demanding construction environments, offering robust lifting capabilities for heavy building materials. Featuring a tall vertical mast and an extended horizontal jib, it provides the necessary reach and height to facilitate efficient vertical transport on high-rise project sites. Designed with safety and operational precision in mind, this equipment is an essential asset for modern construction workflows.

Technical Specifications

Equipment Category	Tower Crane
Primary Application	Construction, Heavy Lifting, Material Handling

Performance Metrics

Key Operational Features

- Vertical mast structure
- Extended horizontal jib reach
- Heavy-duty lifting capacity
- Optimized for high-rise construction
