

Tracked Excavator

This is a tracked excavator used for digging and moving earth. It features a hydraulically powered arm with a bucket attachment.

Overview

High-Performance Tracked Excavator

This tracked excavator is a robust construction machine engineered for efficient digging and material handling. Featuring a tracked undercarriage, it provides exceptional stability and maneuverability across uneven or challenging terrain. The rotating cab ensures optimal operator visibility, while the hydraulically powered arm and bucket attachment allow for precise excavation and loading tasks.

Key Features

Machine Type

Tracked Excavator • Construction Machinery

Design Highlights

Hydraulic System, Rotating Cab, Tracked Undercarriage, Ultra-Short Swing

Technical Specifications

Swing Type

Ultra-short swing

Power Source

Hydraulic
