Product Overview

Professional Transformer Welding Solution

This transformer-based welding unit is engineered for versatile welding applications, providing reliable performance in both workshop and on-site environments. Featuring a robust construction, it includes adjustable settings for voltage and current to ensure precise control over various welding thicknesses. Built-in safety measures, such as thermal overload protection, enhance equipment longevity and user safety for demanding projects.

Technical Specifications

Core Performance

160 A

Rated Output Current

250 BX

Model Capacity

Design & Utility

- Adjustable voltage and current dials
- Thermal overload protection
- Integrated wire feed mechanism
- Portable design with wheels and handle
- Dual operation capability

Welding Modes

MIG, MAG, MMA

Safety & Certification

Safety Features

Thermal Overload Protection • Rectifier Included
