

Trapezoidal Coated Insert with Spherical Element

This is a coated insert with a trapezoidal shape. It features a metallic-looking spherical element contained within its central hole, as well as a recessed area.

Product Overview

Professional Trapezoidal Coated Insert

This trapezoidal coated insert is engineered for precision industrial applications, featuring a specialized central hole with an integrated spherical element. The gold-colored coating indicates enhanced wear resistance and durability, suitable for high-performance machining environments. Its unique geometric design provides stability during heavy-duty operations, ensuring consistent results for professional manufacturing tasks.

Technical Specifications

Design Features

- Central recessed area
- Integrated spherical element
- Center mounting hole

Geometry

Trapezoidal

Surface Coating

Gold-colored, Coated
