

Tribrach Adapter for Surveying Instruments

Precision tribrach adapter designed for surveying instruments. Features include adjustable leveling screws and a circular bubble level for accurate leveling.

Overview

Precision Surveying Support

This tribrach adapter is engineered for high-precision surveying instruments, providing a stable and reliable mounting platform in demanding field conditions. It features an integrated circular bubble level for rapid and accurate leveling, supported by adjustable leveling screws for fine-tuned calibration. Designed for durability and versatility, it ensures secure equipment attachment for consistent measurement accuracy.

Key Features

Core Functionalities

- Integrated circular bubble level
- Adjustable leveling screws for fine-tuning
- Robust construction for field stability
- Universal compatibility with surveying equipment

Applications

Surveying, Field Measurement, Instrument Mounting, Geodetic Surveying
