

Truck-Mounted Articulating Boom Lift

This articulating boom lift mounts on a truck chassis for enhanced mobility. It features a telescopic boom that provides extended reach and maneuverability for accessing elevated work areas.

Overview

Versatile Aerial Access Solution

This truck-mounted articulating boom lift is engineered for high-altitude operations in urban construction, municipal maintenance, and the electric power industry. It features a flexible design with simple, reliable hydraulic controls that ensure safe positioning. The unit is compatible with various truck chassis, offering customizable leg configurations to meet specific operational requirements.

Technical Specifications

Power Source Options

- Vehicle transmission output
- 24V battery-driven hydraulic pump

Compatible Chassis	Fukuda, Qingqi double
Operation Mode	Automatic and manual hydraulic spiral

Application

Suitable Industries

Urban Construction • Municipal • Electric Power
