

Trumpet Horn Buzzer Combination Speaker

This audio transducer combines a trumpet horn and buzzer for enhanced sound projection. It is designed for integration into electronic devices needing directional sound output.

Product Overview

Versatile Audio Signaling Solution

This compact audio transducer is expertly engineered to combine a trumpet-shaped horn for enhanced, directional sound projection with a reliable buzzer component. It is specifically designed for seamless integration into various electronic devices that require robust audible feedback or notification capabilities. Ideal for alarms and audio signaling systems, this speaker provides clear output in a space-saving form factor.

Technical Specifications

Design Features

- Trumpet-shaped horn for projection
- Integrated buzzer signaling
- Compact form factor
- Directional sound output
