

Tungsten Carbide Tipped Saw Blade for MDF

This tungsten carbide tipped (TCT) saw blade is designed for cutting medium density fiberboard (MDF). Its precision-ground teeth ensure clean, splinter-free cuts, while the hardened steel body provides durability.

Product Overview

Professional MDF Cutting Solution

This Tungsten Carbide Tipped (TCT) saw blade is engineered for high-precision cutting of laminated boards and MDF. Featuring advanced tooth geometries like ATB or TCG, it ensures clean, splinter-free finishes and extended tool life. The hardened steel body construction provides superior durability and resistance to warping during demanding industrial applications.

Technical Specifications

Supported Machines

- Circular Saws
- Table Saws
- Miter Saws
- Horizontal Panel Cutting Machines

Tooth Geometries

ATB • TCG

Compatible Materials

MDF Board, Laminated Panel

Performance Features

Performance Highlights

- Precision-ground teeth for splinter-free cuts
- Hardened steel body for warp resistance
- Expansion slots to minimize noise and vibration
- Positive cutting angles for efficient material removal
