

Tungsten Electrode Grinder

This tungsten electrode grinder is designed for precise grinding, cutting, and end face processing of tungsten electrodes. It optimizes tungsten electrode preparation for argon arc welding across different requirements.

Product Overview

Professional Tungsten Electrode Grinding

This portable tungsten electrode grinding machine is designed to improve TIG welding precision while ensuring operator safety. By sealing dust within an enclosed cavity, it protects welders from inhaling heavy metal particles often associated with manual grinding methods. This compact tool delivers consistent grinding angles and supports multiple electrode diameters, making it an essential upgrade for professional welding workshops.

Technical Specifications

Power Output

400 W

Power

Supported Diameters

- 1.0mm
- 1.6mm
- 2.4mm
- 3.2mm

Power Supply

220V (interchangeable with 110V)

Available Polishing Angles

22.5°, 30°

Features

Safety and Usability

Portable Design • Dust Sealed Cavity • Easy Operation • Safety Protection Cover
