

Turbine Generator Set for Power Generation

This turbine generator set converts thermal energy into electrical power. It is designed for large-scale industrial applications, ensuring efficient energy production and distribution.

Overview

High-Capacity Turbine Generator Set

This turbine generator set is engineered for large-scale power generation applications, specifically designed to support technical renovation projects. It facilitates efficient conversion of thermal energy into electrical power, making it suitable for combined heat and power (CHP) plant environments. The system is built for robust performance and high-capacity output, meeting the demanding requirements of industrial energy infrastructure.

Technical Specifications

Power Capacity

300 MW

Unit Output

2 Units

Unit Configuration

Application

Power Generation, Combined Heat and Power, Industrial Renovation
