

Twin-Shaft Concrete Mixer

This twin-shaft concrete mixer is designed for high-volume concrete production. Its robust mixing mechanism features two horizontal shafts with counter-rotating mixing blades for homogeneous mixing.

Overview

High-Performance Twin-Shaft Mixing

The JS1000 is a professional-grade twin-shaft concrete mixer engineered for high-volume production environments. Its robust design utilizes two counter-rotating horizontal shafts to ensure thorough, homogeneous mixing of all concrete ingredients. Built for reliability and efficiency, this mixer features an automatic lubrication system to minimize maintenance requirements and extend the operational lifespan of critical components.

Technical Specifications

Mixing Mechanism	Twin-shaft horizontal design with counter-rotating blades
Maintenance Features	Automatic Lubrication System, Extended Lifespan Design
Discharge Mechanism	Rapid and efficient unloading system

Applications

Recommended Applications

- Ready-mix concrete plants
- Precast concrete production
- Large-scale construction sites
