

Twin Timing Relay

This twin timer is an electronic device engineered for precise on/off cycle management. It features independently adjustable potentiometers for setting both on and off durations, and includes LED indicators to visually display the current state.

Product Overview

Versatile Twin Timing Solution

The ATDV-Y/N Twin Timer is an electronic timing device engineered for precise control over repetitive on and off cycles in industrial automation. Featuring dual adjustable potentiometers, it allows for independent configuration of both timing intervals to suit specific process requirements. Its compact form factor is optimized for efficient panel mounting, while integrated LED indicators provide immediate visual confirmation of the current operating state.

Technical Specifications

Operating Voltage	220 V
Timer Type	Twin Timer (On/Off Cycle)
Adjustment	Dual Potentiometer, Independent Timing

Features

Status Indicators

LED On Indicator • LED Off Indicator

Mounting Style	Panel Mount
