

Twist Wire Termination Board

The twist wire termination board is designed for organizing and securing electrical wire connections. It provides a structured method for terminating twist wires in electronic applications.

Product Overview

Twist Wire Termination Board

The Twist Wire Termination Board is a precision-engineered component designed for secure and reliable wire connectivity in complex electronic assemblies. Featuring high-quality metal blocks with integrated parallel grooves, this board ensures optimal contact and organization for internal wiring paths. It is built to serve as a robust foundation for electrical terminations, providing both durability and efficiency for industrial-grade applications.

Technical Specifications

Design Features

- Parallel groove configuration
- Rectangular geometry
- Compact form factor

Component Type	Wire Termination Board
Material	Metal
