

# Two-Step Semi-Automatic PET Bottle Blowing Machine

This two-step semi-automatic bottle blowing machine is designed for efficient PET bottle production. It utilizes a rotary far-infrared heater control system for precise temperature regulation and consistent bottle forming.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Semi-Automatic Blowing

The JD-S4 is a two-step semi-automatic bottle blowing machine engineered for the precise production of PET bottles. It utilizes a rotary far-infrared heater control system to ensure consistent temperature regulation during the preheating phase. Designed for versatility, this machine supports various neck sizes and bottle volumes, making it an ideal solution for cosmetic, sanitizer, and hand-washing packaging lines.

## Performance Metrics

### Production Capacity

**2000 B/H**  
Max Output

Maximum Bottle Volume	2000 ml
-----------------------	---------

## Technical Specifications

Supported Neck Sizes	20mm, 24mm, 28mm
Cavity Configuration	4
Operation Mode	Semi-Automatic
Blowing Process	Two-Step
Heating Technology	Rotary Far-Infrared

## Compliance & Certification

Certifications  
CE
