

Two-Way Vertical Rice Polishing Machine

This two-way vertical rice polisher is designed for efficient and high-quality rice polishing. The machine utilizes a vertical configuration to optimize the polishing process, ensuring uniform treatment and minimal grain breakage.

Product Overview

Professional Rice Polishing Solution

The Two-Way Vertical Rice Polishing Machine is engineered for industrial-scale rice processing applications. By utilizing an advanced vertical configuration with two-way polishing action, it ensures uniform grain treatment while significantly minimizing breakage. This robust machine effectively removes bran layers to produce high-quality polished rice with enhanced visual appeal and nutritional value.

Operational Performance

Core Benefits

- Minimal grain breakage
- Effective bran layer removal
- Uniform grain treatment
- Optimized industrial processing

Polishing Mechanism

Two-Way Action, Vertical Configuration
