

Uninterruptible Power Supply

This standalone UPS unit provides backup power during power outages. It protects electronic equipment from voltage fluctuations, surges, and blackouts.

Overview

Reliable Power Protection

This standalone Uninterruptible Power Supply (UPS) is engineered to provide essential backup power during unexpected outages. Designed for robust performance, it effectively shields sensitive electronic equipment from harmful voltage fluctuations, electrical surges, and complete blackouts. The unit features an intuitive interface and a durable enclosure, making it a reliable solution for maintaining operational continuity.

Technical Specifications

Construction

- Standalone floor-standing unit
- Integrated thermal management grills
- Interactive display screen
- Tactile control interface

Protection Capabilities

Voltage Surge Protection, Blackout Prevention, Fluctuation Filtering
