

Universal Radio Communication Tester

This universal radio communication tester is designed for comprehensive testing of various wireless communication technologies. It features a large color display, a keypad, and multiple RF connectors for signal input and output.

Overview

Comprehensive Wireless Testing

This universal radio communication tester is engineered for rigorous testing across a wide spectrum of wireless communication technologies. Designed for versatility, it supports both measurement and simulation tasks, making it an essential tool for research, development, and production environments. With its intuitive interface and robust RF connectivity, it ensures precision and reliability for demanding technical workflows.

Key Metrics

Model Identifier	LRU200
Part Number	1300.0008.02

Capabilities

Core Functions	RF Analysis, Signal Generation, Wireless Communication Testing, Simulation
----------------	--

Hardware

Interface Features

- Large color display
- Tactile keypad
- Multiple RF connectors (input/output)
