

Universal Rotary Head Milling Machine

This universal rotary head milling machine is a versatile machine tool designed for a wide range of machining operations. The machine features a rotary head that can be swiveled to various angles, allowing for complex milling tasks to be performed with a single setup.

Overview

Versatile Machining Capability

The Universal Rotary Head Milling Machine is a high-performance tool engineered for complex machining tasks in tool and die making, mold production, and general industrial applications. Its standout feature is a swiveling rotary head that allows for diverse angular milling operations in a single setup, significantly enhancing workflow efficiency. This robust design ensures the precision and flexibility required for demanding professional manufacturing environments.

Technical Specifications

Available Models	X5032, X6132
Machine Classification	Universal Rotary Head Milling Machine

Applications

Ideal For

- Tool and die making
- Mold making
- General precision machining
