

Upright Fire Sprinkler Head

This automatic fire sprinkler head is designed for fire suppression systems. It features a fusible link bulb that breaks at a specific temperature, releasing water to extinguish or control fires.

Product Overview

Professional Fire Suppression Solution

This automatic fire sprinkler head is engineered for reliable performance in fire suppression systems across commercial and industrial environments. It utilizes a precision fusible link bulb designed to rupture at a specific temperature threshold, ensuring an immediate and effective response to potential fire hazards. The upright orientation facilitates installation above piping, providing optimal coverage for large-scale facilities.

Technical Details

Functional Status

Automatic Operation

Mounting Orientation

Upright

Activation Mechanism

Fusible link bulb

Recommended Settings

Commercial, Industrial
