

# VAG K+CAN Diagnostic Cable

Diagnostic cable facilitates communication with vehicle systems using the VAG protocol. The K+CAN interface supports both K-line and CAN bus communication, enabling diagnostics, adaptation, and coding.

## Product Overview

### Advanced Diagnostic Interface

The VAG K+CAN Commander 1.4 is a professional-grade diagnostic tool designed for advanced automotive tasks within the Volkswagen Audi Group ecosystem. It enables deep system access through both CAN-bus and K-Line protocols, supporting ECU programming, immobilizer data management, and odometer correction. This versatile cable is an essential utility for automotive technicians performing complex module adaptations and system maintenance.

## Technical Specifications

Supported Protocols	CAN-TP2.0, K-Line, CAN Bus
Diagnostic Address Range	0x01 to 0x80

## Core Functionalities

### Advanced Capabilities

- Odometer correction
- Read/Program immobilizer data
- Read/Write EEPROM for instrument clusters
- Read/Write Engine Control Unit (ECU) memory
- Airbag crash data clearing
- MMI TV activation

### Security & Coding

- Read Security Access Code/Login WFS
- Component security authorization
- PIN, SKC, BGW, MAC programming
- Key learning (including Porsche Cayenne)

## Compatibility

Vehicle Brands Covered	Audi, VW, Seat, Skoda, Porsche
------------------------	--------------------------------

## Package Contents

### Items in Package

- 1pc K+CAN 1.4 Diagnostic Cable
- 1pc Software CD Drive
