

Variable Speed Swimming Pool Pump

This variable speed swimming pool pump maximizes water flow and energy efficiency while minimizing noise. Its components are molded of corrosion-proof reinforced thermoplastic for durability and long life.

Overview

High-Efficiency Intelligent Circulation

This self-priming circulation pump utilizes innovative permanent magnet motor technology to significantly reduce energy consumption and operating costs. By incorporating variable speed capabilities and proprietary digital controls, it allows for custom programming to meet specific water circulation needs. This design promotes superior water quality while simultaneously lowering CO2 emissions for both residential and commercial swimming pool applications.

Performance & Technology

Motor Type	Permanent Magnet Motor
Operational Control	Variable Speed with Digital Interface
Key Advantages	Energy Efficient, Self-Priming, Noise Reduction, Custom Programming

Features

Safety Protections

- Overheating Protection
- Digital Monitoring

Applications

Suitable Applications

Residential Pools • Commercial Pools
