

Variable Temperature Heat Gun

This heat gun is designed for a variety of applications, including paint removal and plastics bending. It features variable temperature settings for precise control and optimal results on different materials.

Product Overview

Professional Variable Temperature Heat Gun

This high-performance heat gun is engineered for versatility and precision, making it an essential tool for tasks like paint removal, plastic bending, heat-shrink tubing, and pipe thawing. It features a digital LCD display and variable airflow controls to ensure optimal results across a wide range of materials. Designed for comfort and durability, the ergonomic soft-grip handle allows for extended use without fatigue, while integrated safety features like thermal overload protection ensure long-term reliability.

Key Features

Advanced Functionality

- LCD Digital Display for precise temperature monitoring
- Continuously adjustable temperature and variable airflow
- Constant Heat Control for stable, non-stop operation
- Historical memory function for quick start-up settings
- Over-heat protection system for tool longevity

Design & Ergonomics

Design Highlights

Ergonomic Design, Soft Grip Handle, Comfortable Handling, Fatigue Reduction

Applications

Typical Applications

Paint Removal • Plastic Bending • Heat Shrink Tubing • Thawing Pipes
