

VDSL Router and Switch

This VDSL router and switch provides network connectivity. It features VLAN isolation and bandwidth control.

Product Overview

Professional VDSL Routing and Switching Solution

This versatile VDSL router and switch system is engineered for reliable connectivity in metropolitan network environments. Designed to interface seamlessly with PBX systems and IP metropolitan area networks, it supports advanced features like VLAN isolation and granular bandwidth control. It provides a robust architecture for residential connectivity, ensuring efficient traffic management across VDSL and GE interfaces.

Technical Specifications

Available Series

- VM-2524
- VM-2548
- VS-2500 Series

System Integration

Component	Functionality
PBX System	Voice Integration
IP Metropolitan Area Network	Backbone Connectivity
VDSL Switches	Residential Distribution

Supported Features

VDSL, VLAN Isolation, Bandwidth Control, GE Uplink
