

Vehicle Speed Sensor

This speed sensor is designed for the XRE 300. It accurately measures rotational speed of a vehicle's wheel or transmission, providing data to the vehicle's computer for functions such as speedometer readings, anti-lock braking system (ABS), and traction control.

Product Overview

High-Precision Speed Sensor

This vehicle speed sensor is precision-engineered for reliable rotational speed measurement in transmission and wheel systems. It provides essential data for critical vehicle operations, including speedometer accuracy, ABS management, and traction control systems. Constructed from high-impact, durable materials, it ensures long-term performance under demanding automotive conditions.

Technical Specifications

Included Components

- Integrated wiring harness
- Connector
- Mounting hardware
- Mounting clips

Compatibility	XRE 300
Housing Material	High-impact plastic
Wiring Protection	Flexible, abrasion-resistant sheath

Applications

Primary Functions	Speedometer, ABS, Traction Control
-------------------	------------------------------------
