

# Velcro Sanding Discs for Metal Polishing

Velcro sanding discs designed for metal polishing applications. These discs are suitable for use with orbital sanders and other power tools.

## ADDITIONAL IMAGES

## Product Overview

### Industrial-Grade Metal Polishing Solutions

These high-performance sanding discs are engineered specifically for metal polishing, grinding, and cleaning applications. Featuring a durable construction with a reliable Velcro backing, they ensure secure attachment to power tools for consistent, high-speed operation. Available in both vacuum hole and non-hole configurations, these discs provide uniform abrasion for a smooth, professional finish on various metal surfaces.

## Technical Specifications

Available in both vacuum hole and non-hole configurations to suit different power tool requirements.

Industrial-grade discs designed for versatile surface preparation including polishing, grinding, and cleaning.

### Available Configurations

- Vacuum Hole Hook & Loop
- No-hole Velvet Hook & Loop

### Certifications

ISO 9001

### Compatible Materials

Metal, Wood, Plastic, Fiberglass

## Performance Features

GOOD QUALITY  
Imports of raw materials

Uniform particles Grinding force Not sand

Engineered with uniform particles to ensure consistent grinding force and superior finish quality.

Flocking Strong adsorption force  
High-speed operation does not fall off

Strong flocked backing provides high adsorption force, preventing detachment during high-speed operation.

### Performance Highlights

**1 High**

Adsorption Force

**1 Uniform**

Surface Finish

### Operational Benefits

- High-speed operation stability
- Strong flocking backing for security
- Uniform particle distribution for consistent abrasion
- Durable construction for extended service life
