

Vertical CNC Machining Center

This high-precision vertical machining center is designed for metalworking applications. It features a robust frame, advanced CNC control system, and high-speed spindle for efficient material removal.

Overview

High-Precision Vertical Machining Center

This vertical machining center is engineered for high-precision metalworking applications, offering superior material removal rates and operational efficiency. Built with a robust frame for maximum stability, it integrates an advanced CNC control system to handle complex machining tasks with ease. The inclusion of an automatic tool changer and a dedicated coolant system ensures consistent productivity and accuracy for demanding industrial environments.

Performance Metrics

Capability Highlights

1 High

Precision Level

1 Auto-Tool

Automation

Model Identifier

XH718

Key Features

Key Features

High-Speed Spindle, Automatic Tool Changer, Coolant System, Robust Frame Construction
