Overview

Automated Packaging Solution

This vertical form, fill, and seal machine is engineered for the automated packaging of granular, powdered, and various other articles. By integrating film construction, precise filling, and sealing into a single continuous process, it significantly enhances production efficiency while reducing labor requirements. Its robust stainless steel construction ensures high hygiene standards and long-term durability, making it an ideal choice for food, pharmaceutical, and general industrial applications.

Technical Specifications

Key Components

- Central filling funnel
- Forming collar
- Heat sealing mechanism
- Control panel with digital display
- Conveyor belt output

Construction Material

Stainless Steel

Mobility

Yes

Performance Metrics

Operational Capabilities

2 rolls

Film Roll Capacity

Applications

Compatible Product Types

Granular • Powdered • General Articles

Suitable Industries

Food Processing, Pharmaceuticals, Industrial Goods
