

Vertical Horizontal HVAC Climate Control Unit

This vertical horizontal unit is a commercial or industrial HVAC climate control system. It integrates with a hydronic system to provide both heating and cooling.

Product Overview

Professional Climate Control Solution

This commercial-grade HVAC unit is designed for versatile installation, supporting both vertical and horizontal configurations to suit diverse building layouts. Engineered for integration with hydronic systems, it serves as a robust water source heat pump capable of providing reliable heating and cooling. Its durable metal cabinet construction ensures longevity and performance in professional or large-scale residential environments.

Technical Specifications

Orientation	Vertical, Horizontal
Application	Hydronic HVAC System
Casing Material	Metal Cabinet
