

Vertical Machining Center

This vertical machining center is used for milling and drilling operations. Its robust construction and precision engineering make it suitable for manufacturing complex parts with high accuracy.

Overview

Precision Vertical Machining Center

This vertical machining center is designed for high-precision milling and drilling operations, making it an ideal solution for manufacturing complex components. It features a robust, fully enclosed work area that ensures operator safety while allowing for clear process monitoring through a transparent window. The integrated control panel offers intuitive programming and operation, supporting efficient production workflows.

Technical Specifications

Primary Functions

- Milling
- Drilling

Model Identifiers	ZXX-320, ZXX-32, SUPERCELL-6
Machine Type	Vertical Machining Center

Features

Safety & Design

Fully Enclosed Work Area • Transparent Monitoring Window • Robust Construction • Precision Engineered
