

Vertical Machining Center for Metal and Plastic

This vertical machining center is designed for precision milling and drilling. It is suitable for prototyping, mold making, and production manufacturing across a variety of materials including metals and plastics.

Overview

Precision Vertical Machining Center

This vertical machining center is engineered for high-precision milling and drilling operations across both metal and plastic workpieces. It features a fully enclosed workspace that ensures operator safety and effective chip containment during high-speed production. With its robust frame design and advanced multi-axis control system, it is an ideal solution for complex part geometries, mold making, and rapid prototyping.

Technical Capabilities

Compatible Materials

- Metals
- Plastics

Machining Operations

Milling, Drilling, Mold Making, Prototyping

Design & Construction

Safety Features

Fully Enclosed Workspace • Chip Containment

Frame Construction

Robust frame for high-speed stability

Control System

Control System

Multi-axis control system
