

Vertical Multistage Firefighting Pump

The vertical multistage firefighting pump is designed for reliable water delivery in fire suppression systems. It features a vertical configuration for optimized space utilization and high-pressure performance.

Product Overview

Professional Fire Suppression Solution

The XBD-DL series is a high-performance vertical multistage pump engineered specifically for fire-fighting applications. Its compact design ensures efficient space utilization while delivering the high pressure required for reliable water delivery in critical fire suppression systems. Built with corrosion-resistant, durable materials, this pump offers consistent, stable operation and simplified maintenance for industrial, commercial, and residential environments.

Technical Features

Operational Advantages

- High-pressure water delivery
- Space-saving vertical orientation
- Stable and low-noise operation
- Corrosion-resistant construction

Design Configuration

Vertical multistage

Compliance and Usage

Application Areas

Residential Buildings, Commercial Complexes, Industrial Facilities
