

Vertical Turbine Centrifugal Pump for Water Supply

This centrifugal pump is a rotodynamic pump using a rotating impeller to increase fluid energy. The vertical turbine design is suitable for water supply, irrigation, and various industrial processes.

Product Overview

High-Efficiency Vertical Turbine Pump

This vertical turbine centrifugal pump is engineered for demanding fluid transport applications, including municipal water supply, agricultural irrigation, and heavy-duty industrial processes. Featuring a robust multi-stage design, it excels at generating high head and consistent flow rates. Its durable metal construction ensures long-term reliability and corrosion resistance in challenging environments.

Technical Specifications

Pump Type	Vertical Turbine Centrifugal
Design Features	Multi-stage, Rotodynamic, High Head, Industrial Grade
Construction Material	Cast Iron / Steel

Applications

Primary Applications

- Municipal Water Supply
- Agricultural Irrigation
- Industrial Fluid Processes
