

Walk-Through Temperature Screening and Disinfection Machine

Mobilizable compact machine features a temperature measurement zone and a disinfection zone. The system provides accurate and rapid temperature detection for complete body disinfection.

Overview

Automated Hygiene & Screening Solution

This walk-through machine provides an integrated solution for public health safety by combining automated temperature screening with whole-body disinfection. Designed for high-traffic environments, it enables rapid, contactless detection of body temperature while simultaneously applying disinfectant to ensure comprehensive hygiene. Its compact and mobilizable design makes it an ideal choice for transportation hubs, commercial buildings, and public venues looking to streamline entry protocols.

Key Features

Core Functionalities

- Contactless temperature measurement
- Automated whole-body disinfection
- Rapid screening throughput
- Mobilizable compact structure
