

Walking Tractor

This walking tractor is adapted for use in plains, mountains, hills, paddy fields, and dry land. It is mainly used for field operations such as plowing, raking, tilling, harvesting, and mowing.

Overview

Versatile Agricultural Solution

The walking tractor is a robust and highly adaptable machine engineered for diverse agricultural environments, including plains, mountains, hills, paddy fields, and dry land. Its versatile design supports a wide range of field operations such as plowing, rotary tillage, and harvesting, while also functioning effectively in orchards and forests. Built for durability and efficiency, this tractor serves as a reliable multi-purpose asset for small to medium-sized farming operations.

Operational Capabilities

Field Operations

- Plowing
- Raking
- Flat earth preparation
- Rotary tillage
- Harvesting
- Mowing
- Ridging
- Sowing
- Spraying

Transport Capacity

1000 Kg

Towing Capacity

Fixed Station Operations

- Pumping
- Threshing
- Grinding
- Milling
- Cotton ginning
- Power generation

Design & Ergonomics

Usability Features

Adjustable Handlebars • Compact Design • High Maneuverability • Attachment Compatible

Terrain Suitability

Plains, Mountains, Hills, Paddy Fields, Dry Land, Orchards, Forests
