

Wall Hung Gas Boiler

This wall hung gas boiler features intelligent PCB control for convenient usage and malfunction analysis. Its advanced burning technology ensures high heating efficiency and includes various protection measures.

Product Overview

High-Efficiency Residential Heating

This wall-hung gas boiler leverages over 40 years of European engineering to provide reliable home heating and hot water. It features over 20 integrated safety measures and is designed for individual home control, offering significant improvements in comfort and efficiency over traditional centralized heating. Users benefit from adjustable temperature settings and high-performance heating capabilities suitable for various residential needs.

Technical Specifications

Heating Efficiency

97 %

Condensing Efficiency

Available Designs

- Atmospheric
- Condensing

Capacity Range

13kW to 99kW

Supported Fuel Types

Natural Gas (NG), Liquefied Petroleum Gas (LPG)

Features

Key Advantages

- Environmentally friendly operation with low fume emissions
- Independent temperature adjustment for personalized comfort
- Dual functionality: supplies both heating and hot water
- High power output compared to electrical water heaters

Safety Compliance

20+ Protection Measures • Overheat Protection • Flame Failure Safety
