

Washing Machine Heating Element

This heating element is designed for use in washing machines. It provides efficient and reliable heating of water for effective cleaning.

Product Overview

High-Efficiency Heating Solution

This premium washing machine heating element is engineered for rapid and consistent water heating, ensuring optimal cleaning performance. Designed with a durable tubular construction, it offers excellent corrosion resistance and long-lasting operational life. The unit features robust electrical terminals and a versatile design, making it a reliable component for various professional washing machine maintenance and manufacturing needs.

Technical Specifications

Tube Diameter

- 6.5
- 8.5

Internal Materials

Component	Standard Material
Resistance Powder	Magnesium oxide
Resistance Wire	Ni80Cr20
Faston Terminal	Nickel plated iron
Leads	Stainless steel

Sheath Material

SUS316L / Copper coating Ni

Performance Metrics

Performance Ratings

230 V

Voltage

5.5 KW

Max Power

Certifications

Standards Compliance

CE, CQC, RoHS, ISO 9001
