

Washing Machine Motor

Electronic control motor designed for washing machine applications. Operates on 220-240V at 50/60Hz.

Product Overview

High-Performance Electronic Control Motor

This electronic control motor is precision-engineered for reliable washing machine applications. It supports dual-cycle operation, delivering optimized power for both washing and spinning phases. Built for durability and international standards compliance, this unit serves as a robust replacement or component for modern laundry appliances.

Technical Specifications

Model Number	HXGP21 DC31-00002H
Input Voltage	220-240V
Frequency	50 Hz

Operating Metrics

Performance Metrics

30 W Washing Power	300 W Spinning Power	3 A Current
------------------------------	--------------------------------	-----------------------

Cycle Specifications

Cycle Type	Power	Current
Washing	30W	3.0A
Spinning	300W	3.0A

Compliance & Quality

Certifications	CE, Q.C. Pass
