

Washing Machine P Shaft

The P shaft is designed for use in washing machines. This component is crucial for transferring rotational motion within the washing machine's drive system, enabling the agitation and spinning functions necessary for effective laundry cleaning.

Product Overview

High-Performance P Shaft for Washing Machines

The WJ-235 P shaft is a critical component engineered to facilitate the rotational motion required for effective washing and spinning. Built to withstand the rigorous mechanical stresses and moisture-heavy environment of a laundry system, this shaft ensures consistent operational stability. Its robust construction promotes long-term reliability, making it an essential part for maintaining machine efficiency across a variety of models.

Technical Details

Design Advantages

- High mechanical stress tolerance
- Corrosion-resistant material composition
- Precision-engineered dimensions
- Universal model compatibility

Model Identifier	WJ-235
Primary Functions	Rotational Motion Transfer, Agitation Support, Spin Cycle Drive
