

# Washing Machine Plastic Part Molds

These molds are designed for creating high-quality plastic parts used in washing machines. They ensure precise dimensions and consistent production of components like front panels and drums.

## Product Overview

### Precision Washing Machine Component Tooling

This collection of high-precision plastic injection molds is specifically engineered for the mass production of essential washing machine components. The tooling set includes specialized molds for front panels, drums, and various internal housing parts. Designed for durability and consistent output, these molds ensure dimensional accuracy for all manufactured plastic components.

## Technical Specifications

### Model ID References

- 500
- 501
- 503
- 504
- 511
- 512

### Certification

Industrial Grade • Precision Tooling

### Applicable Parts

Front Panels, Drum Components, Plastic Housings
