

Washing Machine Speed Reducer

This speed reducer is a component typically used in washing machines. It efficiently transfers power from the motor to the washing machine's agitator or drum, controlling the speed and torque for optimal washing performance.

Product Overview

High-Efficiency Speed Reduction

The WJ-0066-B speed reducer is a vital component engineered for washing machines to ensure optimal performance. By effectively transferring power from the motor to the drum or agitator, this unit precisely controls speed and torque. Constructed from durable, high-quality plastic, it provides reliable operation and enhanced efficiency throughout various wash cycles.

Technical Specifications

Model Number	WJ-0066-B
Construction Material	Durable reinforced plastic
Component Type	Speed Reducer, Gearbox, Power Transmission

Operational Details

Core Function

- Motor speed reduction
- Torque management for wash cycles
- Power transfer to agitator or drum
