

Washing Machine Speed Reducer

This speed reducer is designed for washing machines. It efficiently reduces the motor's speed to power the agitator or drum.

Product Overview

High-Efficiency Speed Reducer for Washing Machines

The WJ-006 speed reducer is a high-performance mechanical component engineered for optimal torque conversion in washing machine systems. It effectively translates high-speed motor rotation into the precise operational speeds required for both washing and spinning cycles. Built for durability and consistent power transmission, this component ensures the reliable performance and longevity of the appliance's drivetrain.

Technical Details

Model Number	WJ-006
Category	Household Electrical Appliances, Washing and Drying Machinery
Primary Application	Washing machine agitator and drum rotation control

Performance Features

Operational Efficiency

1 High

Reliability Rating

1 Optimized

Transmission Efficiency
