

Washing Machine Speed Reducer

This washing machine speed reducer efficiently regulates the motor's rotational speed for optimal washing and spinning cycles. Its robust construction and durable housing ensure longevity and reliable performance.

Overview

High-Performance Speed Regulation

The WJ-004 washing machine speed reducer is a high-torque component engineered for precise control over washing and spinning cycles. Built with a durable housing, this unit ensures reliable power transmission while significantly reducing noise and vibration levels. It serves as an essential solution for appliance manufacturers and technicians seeking consistent performance and long-term operational efficiency.

Specifications

Compatibility

- Washing machine motor speed regulation
- Appliance manufacturing
- Professional appliance repair

Model Number	WJ-004
Key Features	High Torque, Noise Reduction, Vibration Damping, Durable Construction
