Product Overview

Professional Climate Control

The WPR Series is a range of ducted, water-cooled packaged air conditioners engineered for year-round climate control in high-rise offices and multi-unit buildings. These compact units are designed for concealed installation above ceilings, effectively saving floor space while providing direct, precise air conditioning. By allowing individual zone control, they offer an economical alternative to large central systems, especially for off-peak or after-hours building operation.

Technical Specifications

Available System Versions	Cooling Only, Cooling Only with Electric Heating, Reverse Cycle
Installation Method	Ducted concealed (above ceiling or in-space)

Features

Key Operational Benefits

- Individual zone control for owner occupiers
- Space-saving compact design
- Water-cooled efficiency for high-temperature environments
- Economical multiple small-unit configuration
- Suitable for off-peak and after-hours operation
