

Water Pump Pressure Controller

This pressure control device is designed for water pump systems, ensuring efficient and safe operation. It is used in residential, commercial, and industrial applications to maintain consistent water pressure and prevent damage to the pump and plumbing.

Product Overview

Professional Water Pressure Control

The BSK-3A is a robust pressure control device engineered for efficient and safe management of water pump systems. Designed for versatility, this unit is suitable for residential, commercial, and industrial environments to ensure consistent water pressure and system protection. Its adjustable settings allow for precise configuration to meet specific plumbing requirements, while the durable construction ensures long-term operational reliability.

Technical Specifications

Model Identifier	BSK-3A
Adjustable Settings	Yes
Common Applications	Residential, Commercial, Industrial

Maintenance & Installation

Installation	Simplified installation and low maintenance requirements
