

Water-Soluble Biological Organic Fertilizer

This biological organic fertilizer is a water-soluble fertilizer designed to enhance soil fertility and promote healthy plant growth. It is suitable for various application methods, including fertigation, base application, hole application, and seedling cultivation.

Product Overview

Biological Organic Fertilizer

This water-soluble biological organic fertilizer is engineered to enhance soil fertility while promoting robust plant growth. It is highly versatile, supporting multiple application methods including fertigation, base application, hole application, and seedling cultivation. By focusing on soil activation and improved root development, this product helps farmers achieve higher crop yields and superior quality.

Technical Specifications

Active Bacteria Count

0.2 billion/g
Active Bacteria

Organic Matter	25 %
Net Weight	20 kg

Application

Recommended Application Methods	Fertigation, Base Application, Hole Application, Seedling Cultivation
---------------------------------	---

Compliance

Regulatory Standards

Category	Reference
Microbial Fertilizer Registration	(2005) 0244
Execution Standard	NY884-2004
