

Water Transfer Pump

This water pump is designed for various applications, including irrigation and drainage. It features a durable motor with cooling fins and a sturdy pump housing, ensuring longevity and resistance to corrosion.

Product Overview

Industrial Water Transfer Solution

This robust water transfer pump is engineered for consistent performance in irrigation, drainage, and general water movement tasks. Constructed with a durable motor featuring heat-dissipating cooling fins, it ensures long-term reliability even under demanding conditions. The unit is housed in a corrosion-resistant casing with a sealed electrical enclosure to provide superior protection against moisture and dust ingress.

Technical Specifications

Primary Applications

- Agricultural Irrigation
- Water Drainage
- General Liquid Transfer

Key Features

Corrosion Resistant, Sealed Enclosure, Heat Dissipation Fins, Durable Construction

Port Configuration

Standard integrated inlet and outlet plumbing ports
