

Wedge-Shaped Insulation Clamp

This wedge-shaped insulation clamp is designed for urban and rural networks at 1KV and 10KV. It is suitable for short distances and overhead insulated aluminum lines, providing terminal or tension-side strain insulation.

Product Overview

Reliable Electrical Connection

The Wedge-Shaped Insulation Clamp is engineered for secure and reliable electrical connections in demanding environments. Its robust construction utilizes high-quality insulating materials to ensure operator safety and effectively prevent short circuits. Designed for versatility, this clamp is suitable for various cable sizes and is an ideal solution for electrical panels, distribution boxes, and general electrical installations.

Technical Features

Typical Applications

- Electrical Panels
- Distribution Boxes
- Insulated Cable Installations

Key Features

Insulated Design, High Mechanical Strength, Electrical Conductivity, Short-Circuit Prevention
