

Welding Hand Shield

The welding hand shield is a protective device that shields the eyes and face from sparks and radiation during welding. It is made from heat-resistant materials and has a dark filter lens.

Product Overview

Professional Welding Hand Shield

This welding hand shield is a high-performance protective device engineered to safeguard the welder's face and eyes from hazardous sparks, spatter, and intense radiation. Constructed from durable, heat-resistant materials, it provides reliable protection during demanding welding operations. The ergonomic handle design ensures a secure, comfortable grip while allowing for precise maneuverability in various working environments.

Technical Specifications

Protection Features	UV Radiation Protection, IR Radiation Protection, Spark Resistance, Spatter Resistance
Lens Type	Dark filter lens

Design & Ergonomics

Material Characteristics	Heat-resistant • Durable
Handle Design	Ergonomic grip
