Overview

High-Efficiency Wet Peeling Solution

The Wet Almond and Peanut Skin Peeling Machine is an essential piece of equipment for deep-processing operations, specifically designed for high-efficiency skin removal. It is perfectly suited for preparing ingredients for almond milk, protein powder, and various nut-based snacks by ensuring the nut remains intact and protein content stays invariant. Featuring automated skin and nut separation, this machine improves production workflows for food processing facilities.

Operational Capabilities

Key Features

- High peeling rate
- Automatic leather and nut separation
- Nut integrity preservation
- Surface browning prevention
- Protein-neutral processing

Typical Applications

- Almond milk and dew production
- Almond protein powder
- Almond syrup preparation
- Almond slicing and particle processing
- Pre-processing for almond oil mills
- Eight treasures porridge ingredient preparation

Suitable Materials

Almonds, Peanuts, Beans, Soybeans

Design and Quality

The machine features a robust stainless steel design with an integrated water spray system for optimal skin separation.

Material Construction

Stainless Steel

Safety Features

Emergency Stop, Overload Protection
